EDUCATION

Bachelor of Science in Computer Science and Cybersecurity | Aurora University, Aurora, IL | May 2024

CERTIFICATIONS

CompTIA Security+ (SY0-701) • Microsoft Security Operations Analyst (SC-200) • Microsoft SC-900 • HTB Certified Defensive Security Analyst (CDSA) (in progress)

PROFESSIONAL SUMMARY

Systems Administrator with 3+ years of experience managing a mobile device fleet across every ALDI USA location using Ivanti Neurons MDM and Apple Business Manager, supporting vendor coordination and digital process documentation for a large, distributed organization. Complements this with self-directed study and lab work in cloud security, including Microsoft Sentinel SIEM, KQL detection development, Microsoft Entra ID, and vulnerability scanning with Tenable Nessus, earning CompTIA Security+ and Microsoft certifications along the way. Skilled in technical documentation and cross-functional collaboration. Seeking to bring this foundation into a cybersecurity-focused role.

TECHNICAL SKILLS

Mobile Device Management: Ivanti Neurons MDM (deployment, configuration profiles, compliance policies across 15,000+ devices), Apple Business Manager (device provisioning and rights management)

Device & Vendor Support: iPad, iPhone, and handheld scanner (Almex) support, Verizon vendor coordination, ServiceNow ticketing for store and corporate users

IT Operations & Documentation: Digital process documentation, BeyondTrust remote support administration, Calero telecom platform (superuser), usage-data-driven service recommendations

Self-Directed Security & Cloud (Certifications/Labs): Microsoft Sentinel (SIEM), KQL log analysis and detection rule development, Microsoft Defender, Microsoft Entra ID (Azure AD), Microsoft 365 security concepts, threat detection mapped to MITRE ATT&CK, Tenable Nessus (credentialed scanning, vulnerability prioritization with CVSS/VP/EPSS, remediation verification)

Compliance & Risk Awareness: Internal MDM policy compliance auditing, security team escalation for compromised accounts/credentials, IAM coordination for store user group changes, NIST 800-171 familiarity

Automation: PowerShell, Python

PROFESSIONAL EXPERIENCE

Systems Administrator | ALDI USA (Hybrid)

May 2023 – Present

- Manage and monitor mobile devices across all ALDI locations using Ivanti Neurons MDM to deploy configurations, applications, and compliance policies across 15,000+ devices, and oversee device provisioning and rights management using Apple Business Manager to ensure devices are correctly configured and connected to necessary servers.
- Provide Level 2 end-user device support for iPads, iPhones, and Almex handheld scanning devices through ServiceNow tickets, and coordinate with Verizon on device procurement to meet store needs, including replacements and additional orders for curbside service implementations.
- Took ownership of a significant backlog of device procurement and replacement orders, ensuring orders were placed and delivered to the correct stores, organizing the incoming order queue, and establishing a process to keep it manageable going forward.
- Audit devices against internal MDM compliance policies to identify and remediate non-functioning or out-of-policy devices across the fleet.
- Led enterprise deployment and adoption of BeyondTrust remote support, authoring support documentation and training end users; presented the project to department directors and a VP as part of an internal showcase. Also serve as a superuser for Calero, assisting in testing prior to full rollout.
- Develop and maintain documentation for digital processes and guidelines, collaborate with IT and business teams to enhance digital workflows, and analyze user feedback and usage data to recommend upgrades aligned with user needs and business objectives.
- Escalate to the security team when encountering leaked credentials or compromised accounts, and collaborate with the IAM team on account and user group changes across store locations as needed.

Warehouse Associate | Amazon, Channahon, IL

November 2020 – September 2023

- Consistently met productivity and accuracy targets while demonstrating reliability in a fast-paced, high-volume environment.

SECURITY PROJECTS (SELF-DIRECTED)

Microsoft Sentinel SIEM Lab | Azure

- Built and expanded a cloud-based SOC using Microsoft Sentinel integrating Microsoft Entra ID; developed three KQL detection rules covering brute force (T1110), impossible travel (T1078/T1550), and privilege escalation (T1078.004); automated attack simulation via a PowerShell script using the Microsoft Graph API to validate detection rules programmatically; built a SOC dashboard using Sentinel Workbooks.

Network Traffic Analysis Lab

- Captured and analyzed network traffic in Wireshark within an isolated VMware lab to detect ARP spoofing (MITM) and TCP SYN port scanning, mapped to MITRE ATT&CK techniques T1557 and T1046.

Vulnerability Scanning Lab | Tenable Nessus

- Ran credentialed and uncredentialed Tenable Nessus scans in an isolated VMware lab; prioritized by CVSS, VPR, and EPSS, remediated and rescan-verified fixes, cutting Critical and High findings on a Windows 11 host from 69 to 0.

NIST 800-171 Compliance Self-Assessment Tool

- Developed a web-based tool aligned with NIST 800-171 to help organizations identify security control gaps and prioritize remediation.
